### Summary

---

I am a Full-Stack Developer with a 4-year legacy in hardware engineering and systems repair. This background has instilled in me a rigorous approach to problem-solving: I don't just fix bugs; I identify root causes and optimize for long-term scalability.

My focus is building high-performance applications using the **MERN stack**, with a heavy emphasis on **TypeScript** for type-safe, maintainable code. My current toolkit includes:

- **Frontend:** React.js, Redux, and responsive UI/UX.
- **Backend:** Node.js, Express.js, and RESTful API design.
- **Database:** MongoDB (NoSQL) and data modeling.
- **AI & DevOps:** LLM integration, Ai automation, and Docker.

I specialize in utilizing AI tools to streamline the development lifecycle—allowing me to build smarter products with the speed today's market demands. Whether I'm architecting a complex backend or refining a user journey, I bring a "Hardware Technician's precision" to every line of code.

If you're looking for a developer who understands both the silicon and the software, let's connect.
